Abstract (en)

[origin: EP1762668A2] The material (10) has a carrier material (12) provided with slots that are connected with one another and applied on a surface of a step (24). The carrier material has two carrier material-sections that are connected with one another. The sections are dimensioned in such a manner that one section in its breadth corresponds to a length of a step edge, and the other section in its breadth corresponds to the length of the step edge and in its height corresponds to perpendicular height of a side step surface (24a) of a stair step that is provided with a slatted area.
