Abstract (en)

[origin: EP1762998A2] The method involves communicating data identifying a mobile terminal (1) and/or data identifying a user of the terminal in a cellular mobile radio network (8) by an actuating unit (12) via a communication connection (19) in a short distance radio range between the actuating unit and the terminal. The terminal is operable in the radio network, where the communication connection is independent from the radio network. An authorization for controlling the actuating unit is determined based on the data identifying the terminal and/or the data identifying the user of the terminal. An independent claim is also included for a mobile terminal for use in a cellular mobile radio network and for executing a method of controlling actuating units via a wireless communication.
