Abstract (en)

[origin: EP1762999A1] The mounting device (20) has a base plate with a front wall (24) and a rear wall. The front wall and the rear wall are connected with each other via sidewalls and enclose an internal space. The front wall has at least one, preferably several retainer openings (32) for retaining mounting means for connecting with the object. The rear wall has at least one, preferably several openings. The rear wall has at least one, preferably several openings for retaining of pole mounting medium. The front wall also has at least one, preferably several assembly openings (38) by which the opening means of the pole fixing medium are accessible through the openings. The assembly openings are arranged in such a way that they are concealed by the object at the front wall.
