Abstract (en)

[origin: WO2006004538A1] Summary Soil tilling tine entity (12) for a soil tillage implement adapted for rotation relative to the soil tillage implement about a first axis (24) where the movement of the tine entity about the first axis (24) is influenced by at least one springing member (22). At least one tip part (18) is adapted for rotation around a second axis (34) without the influence of the spring member (22) for repositioning the tine entity (12) between an active working position and an inactive parking position. (Fig. 3)
