Abstract (en)
[origin: WO2005115423A1] A composition of potassium derived from organic source, preparation, method and amount of administration for treatment of autoimmune disorders and supplementation in the form of general preparation. A food source which is high in a natural or organic potassium content is first dehydrated to remove water to a substantial degree, i.e. freeze dried; the so dehydrated food source is then reduced to small particles and the carbohydrate content thereof is extracted there from by a solvent in which carbohydrates are more soluble but proteins and organic potassium compounds are not, such as aqueous ethanol; the residue that remains after carbohydrate extraction is dried of solvent and used in pharmaceuticals, food supplements, food products and cosmetics to supplement the body's intake of potassium without possible side effects.
