Abstract (en)

[origin: WO2005099391A2] In accordance with one or more embodiments, a method may provide for receiving a first indicia associated with play of a gaming device, receiving a second indicia associated with play of the gaming device, and modifying, based upon the receipt of both the first and second indicia, a parameter of play of the gaming device. The parameter is only modified if both the first indicia and the second indicia are received. For example, upon receiving both a cash-out ticket and a supplemental ticket, a gaming device may activate a feature or increase a credit balance by more than the face value of the cash-out ticket.
