Abstract (en)

[origin: WO2006002448A1] The invention relates to a convoy (ZUV) comprising at least two intercoupled rail vehicles (WA1, WA2) between which an adapter (UEB) is arranged, said adapter comprising at least two interconnectable sets of bellows (WB1, WB2) which are respectively provided with a plurality of frames (BR1, BR2, BR3, BR4), in addition to adapter sheets (UB1, UB2, UB3, UB4), and a support (AS) for the adapter sheets, that can be displaced on a sliding plate (GULP) arranged between the rail vehicles (WAD, WAD) above a coupling device (KU). At least one anti-catching device (ACC, ACC) is provided on the intercoupled end regions of the rail vehicles (WAD, WAD), said anti-catching devices (ACC, ACC) extending essentially over the entire width of the vehicle, and the two rail vehicles are intercoupled by means of a spiral sleeve (SMU). The sliding plate (GULP) is embodied as three parts, part of the sliding plate arranged on the spiral sleeve (SMU) being detachably connected to the coupling device (KU).
