Abstract (en)
[origin: US2007294964A1] A mobile pavilion having containers arranged next to each other when viewed in a longitudinal direction of the pavilion. The individual containers are placed at a certain distance from each other when viewed in the longitudinal direction of the pavilion so that an intermediate space is formed. The containers have spaces at least in opposite end regions thereof, wherein a free space is arranged between the end regions. At least lateral walls delimiting the spaces are mountable at a variable distance with respect to the end surface in the longitudinal direction of the pavilion so that the mobile pavilion forms a variable ground plan transit space.
