Abstract (en)

[origin: WO2006005300A1] Disclosed is a method for processing measured values, in which distorted measured values, particularly sensory measured values, are recognized in a set of data. In order to reliably recognize distorted measured values, said method is designed and further developed in such a way that the measured values are compared to a predefined or determined model function by means of an appropriate distance measurement and are assessed via a predefined or determined error bound of the distance measurement.
