Abstract (en)

[origin: WO2006003076A2] The invention relates to a material-penetrative localisation of a measurement signal, in particular a material-penetrative positioning method through a material workpiece on walls, ceilings and floors. According to the invention, a high-frequency emitter (20, 120) emits a measurement signal (22,122) in the gigahertz frequency range, which penetrates the material (10) at least once and is detected by a high-frequency receiver (24, 124) in order to localise the penetrative position (18). The invention also relates to a device for carrying out said method.
