Abstract (en)

[origin: WO2005109803A2] Disclosed is a system for managing, creating, modifying, and distributing media content. The system permits a user to customize and distribute the media content over a network from a first network device, such as a personal computer, to a second network device, such as a mobile phone. Prior to distributing the media content, the user can use the first network device to easily and automatically convert the media content from a first format to a second format that is recognizable and usable by the mobile device. Using the disclosed system, a user can easily and quickly access a media file and convert the entire file, or a portion thereof, to the second form.
