Abstract (en)
The garment (1), either a jacket, trousers or apron, has an outer water- and wind-proof layer made from PVC and a textile material that are welded together, and has a layer of foam between the outer layer and a fabric lining covering at least part (4) of its inner surface. The lining is welded at least to the edges of the outer layer, with the foam layer loose inside it, except at the top where it is fastened by a stitched seam (10) to prevent it dropping down inside the garment.
