Abstract (en)

[origin: EP1764070A2] The wheelchair (1), comprising a chassis (2) with an articulated structure with supports for a seat, foot rest (25) and back, incorporates a mechanism (65) with an adjustable stop for regulating the angle between the foot rests and seat in the standing position and the amplitude of relative rotation between the seat and foot rest supporting structures. The seat supporting structure includes at least one deformable quadrilateral with bars (18, 19) forming its long sides, and spacers (20, 21) for its two short sides.
