Abstract (en)

[origin: EP1764471A2] Door leaf has hinge-connected panels (3) and a doorframe made of frame segments. The slip door has a door leaf made of hinge-connected door panels (4) and a door leaf surround made of surround segments (6). The surround segments cover the frame segments of the door frame when the slip door is closed and collect band-shaped strips (9) which bridge the areas between the surround segments when two neighboring segments bend while the sectional gate is being opened or closed, and stop a finger grasping this area.
