Abstract (en)
[origin: WO2006005202A1] The invention relates to a case consisting of a base module (1), an appliance module (2) that can be applied thereto (2), and an extension module (3). Said extension module is connected to a closing module (4) towards the outside. The modules (1, 3) are provided with a pneumatic frame (15) which can be formed from adjacently arranged tubes (11) or sections (10) extending in the frame (15). Compartments (9, 9') which can be sub-divided by partitions (5, 5') are formed by the frames (15). The partition (5) is provided with fillers (6) that enable empty regions to be filled under pressure, in such a way that, for example, an appliance (20) is fixed. Said appliance module (2) is a pneumatic structure like the frame (15), and is provided with an appliance compartment (19), on the edge of which an inflatable chamber (21) is arranged in order to adapt the dimensions of the appliance compartment (19) to the appliance (20).
