Abstract (en)
[origin: WO2006005524A1] The invention relates to a fire extinguisher (10, 30, 110) comprising at least two extinguishing agent containers (11, 111) that are connected to an outlet (28, 128) by means of a common outflow channel (21, 121). According to the invention, the extinguishing agent containers (11, 111) are in the form of communicating pipes, and a single outlet valve (27, 127) is mounted upstream thereof (11, 111). A housing (20, 120) can be used to cover the extinguishing agent containers (11, 111). The inventive fire extinguisher (10, 30, 110) is easy to produce and to use, and can be constructed in any shape and size from different extinguishing agent containers (11, 111).
