Abstract (en)

[origin: US2006016128A1] To determine what fine structure of the surface on which antiload agents are applied performs the function of antiload agents sufficiently. An abrasive material having an antiload coating on an outermost surface thereof, in which the antiload coating contains an antiload agent and a binding resin, the binding resin is formed into a film with cracks, and a reticulate fine structure is formed on an entire surface of the antiload coating by the cracks.
