Abstract (en)

[origin: WO2006005819A1] The invention concerns an instrument panel comprising, mounted on a printed circuit board (4), at least one indicator (1) with pointer (8) mounted rotating on a pin (6) of a driving motor (5), with one pointer indicator end (18) adapted to be driven around a substantially circular dial (13). There is provided, adjacent to the pointer indicator (1), a housing (20) for plugging in a display (40) open frontward, the printed circuit board (4) constituting the back wall of the housing (20). The display includes a body (22), with a front display surface (24) and, projecting backwards relative to the body (22), a plug-in base (23) for electrical and mechanical connection to the instrument panel.
