Abstract (en)

[origin: WO2006019462A1] This writing discusses a motor assembly comprising a lower motor mount and an upper motor mount. The lower motor mount is mechanically coupled with a steering column of a mobile machine. The upper motor mount is coupled with the lower motor mount and with a drive motor. The upper motor mount maintains pressure when in a first position such that a drive wheel coupled with the drive motor stays in contact with a steering wheel of a vehicle of a mobile machine. When the upper motor mount is locked in a second position, the drive wheel is kept away from the steering wheel of the mobile machine.
