Abstract (en)
[origin: WO2006005294A1] The aim of the invention is to reduce the complexity of the power electronics that are used to operate the looms in a high-performance loom combination. To achieve this, according to the invention, the inverter (7) of the drive units of n looms, where n > 1, is connected to a common electric voltage link (5) and a common rectifier supply unit (4), whose energy can be reclaimed, is provided for the drive units of the n looms, said unit being connected to the electric voltage link (5).
