Abstract (en)  
[origin: WO2005125275A2] The present invention relates to optimizing sound for a person based on his or her location and hearing profile. More particularly, the present invention relates to personalizing the sound of an event or performance by examining the technical specifications of an individual's hearing aid (which is provided by a third party) and the acoustics of an establishment. Using this information, a place of business alters the settings of each hearing aid device to optimize the sound for each individual.
