Abstract (en)
[origin: EP1767255A2] A game table apparatus has a game table, a first placement region, a first identification data item reading means, a first calculating means, and a first display means. The first placement region is provided in one area of the game table where a dealer is located and for game value elements held by the dealer to be placed thereon. The first identification data item reading means reads an identification data item from each of the game value elements placed on the first placement region. The first calculating means calculates a total amount of the game value elements placed on the first placement region based on the identification data items. The first display means displays, to the dealer, the total amount of the game value elements calculated by the first calculating means.
