Abstract (en)  
The nozzle has a swiveling body (2) exhibiting less hardness than an overlapping section of a locking part (3) e.g. lock nut, and/or a base body (1). The section has a circular cutting edge (18) that is removed from the body (2) by an un-deformed sealing unit (19), and that is brought in engagement with an exterior surface of the body (2) by the deformed sealing unit (19) to plastically deform the body (2). A concave spherical dome shaped bearing surface (9) is provided at the body (1). An external thread (8) is provided at the body (1) and cooperates with an internal thread of the part. An independent claim is also included for a method for cleaning work pieces using a cleaning device.
