Abstract (en)

[origin: DE102005047096B3] The device has two lifting mechanisms (72, 74) which are connected to a connecting element (82). A central adjustment device (62-66) is provided which cooperates with the connecting element so two separately lifting mechanisms are adjustable in height at the same time by manipulation of the adjustment device. The central adjustment device is mechanically, electrically and or hydraulically propelled. An independent claim is included for a method.
