Abstract (en)

The invention relates to a device (10) for protecting access to a cooking top (12) comprising a frame (15) with a shield (53) that can be freely set in a position in which the shield (53) is operating and suitable for protecting the access to the cooking top (12) or in a position in which the shield (15) is not operating. The device can be fastened to the cooking top and has a construction with an articulated quadrilateral structure allowing the shield (53) to shift from a position to the other without changing its direction relative to the cooking top (12). The invention also relates to a cooking top (12) comprising the device 10.
