Abstract (en)
The device has a rotatable control body (3) attached coaxially around a weapon housing (10) in a level of a pipe core axle. The axle consists of two radial cams (7, 8), where mantle-side and front side of the control body are integrated. An actuator (14) for adjusting a lock is engaged in the mantle sided radial cam at a locking slide. Another actuator (23) is guided in the front sided radial cam for opening and closing the locking bolt.
