Abstract (en)

[origin: EP1768145A1] Device has an operation control unit (12) mounted movably on a fixed support (14) among a rest position, an indexed active position and a temporary over-travel position. A hard point forming unit (23) is activated during the displacement of the control unit by cooperating a cam profile (24) and a complementary elastic cam (26). The control unit cooperates with an electrical contact control unit (18) via an elastic bracing unit (16A) when the unit (12) is between the active and over-travel positions. An elastic unit simultaneously forms the bracing unit and the elastic cam.
