Abstract (en)  
[origin: WO2006007609A1] The invention relates to a method for continuous blending and/or fluidising of a suspension or a pulp and/or for incorporation of gaseous or liquid media into a suspension or a pulp, in particular, into a suspension of a fibrous material in liquids, whereby the suspension or pulp is subjected to shear forces in a rotary mixer (1). According to the invention, a blending or incorporation of media into the suspension or pulp may be carried out efficiently and optionally over a long period, whereby the suspension or pulp is subjected to varying shear forces over the circumference of the rotary mixer (1).
