Abstract (en)

[origin: WO2006008265A1] According to the invention, a coupling electrode (1), for capacitive voltage tapping within an insulation body (9) of an assembly (8,18), comprising at least one conducting section (10, 19) embedded in the insulation body (9) which may be provided with a high voltage potential, with an electrode section (2), made from a semiconducting plastic and a connector element (3), electrically connected to the electrode section (2), embodied to extend from the insulation body (9), may be economically prepared, whereby a retainer (4), made from a non-conducting material, is connected to the electrode section (2) and comprises positioning means (7), with which an insulated mounting of the electrode section (2) is possible.
