Abstract (en)

[origin: WO2006008290A2] A method and an apparatus are presented for providing federated functionality within a data processing system. An incoming first request is received at point-of-contact functionality. In response to a determination that information derived from the received request requires processing by federated user lifecycle management functionality, the derived information is sent from the point-of-contact functionality to the federated user lifecycle management functionality.
