Abstract (en)
The bed has a movable seat part (2) and a back part (3), where the parts are guided in a movable manner to a base frame (4) and reverse transferable to a couch position. The parts have respective coupling units (15, 16), where the parts are connected in the seating position. The parts cause swivelling of the back part, while moving the seat part. The coupling units are decoupled from the couch position by moving the seat part forward.
