Abstract (en)
A dry-ice (T) cleaning assembly has a container (17) with a hose (12) extending into the ice chamber. The hose end is free to be manipulated back and forth (L) within the ice chamber under compressed air control (14). The hose suction tip (12) has a travel-limiting collar whose movement is limited by an end-stop (13), causing dry ice pellets to fracture and break down into smaller grains. The pneumatic system further draws dry ice pellets from the ice chamber and discharges the same via a pistol.
