Abstract (en)

[origin: EP1770346A1] The heat exchanger, comprising a series of alternating flat tube panels (11, 12) for circulating first and second fluids, linked to collector spaces formed by cavities (25) in manifold blocks that are offset relative to one another so they remain separate. The cavities are linked by connectors (34, 35, 36, 37) at opposite ends of the tube panels to feed and return pipes.
