Abstract (en)
It is disclosed a vending machine for selling goods in which the magazine (6) placed inside the housing space of the machine carries a predetermined number of items or goods (7) to be released; the magazine is movable internally of the housing space (3) between a first operating position at which the goods to be released are moved close to the transparent portion (5) to increase visibility of same from the outside, and a second operating position at which the magazine is moved backwards relative to the transparent portion (5) to enable release of the selected item to the picking-up compartment. The vending machine increases visibility of the goods by the external consumer and therefore enables higher sale rates to be achieved.
