Abstract (en)

[origin: WO2006008255A1] An applicator (1) for fluid substances for medical and/or cosmetic use comprises a container (2), which is divided by a transverse breakable partition (3) into a first chamber (4) for containing a fluid substance and a second chamber (5), which is spaced in an axial direction from the first chamber (4) and is provided with an opening (6), a piercing element (7), which is associated with the opening substantially hermetically with respect to the substance and so that it can slide axially between a first configuration, in which it does not interfere with the partition (3), and a second configuration, in which it interferes with the partition (3) in order to break it, an axial hole (8) formed through the piercing element (7), a porous pad (9), which is associated with the end of the piercing element (7) that is directed toward the outside of the container (2), and a cap (10) for covering the pad (9), which is detachably associated with the piercing element (7).
