Abstract (en)

[origin: WO2006010717A2] The invention relates to a moulding material containing the following components: I. 50 to 99.98 weight parts of thermoplastic polyester, II. 0.02 to 5 weight parts of a copolymer containing polysiloxane blocks and polyester blocks, III. 0 to 49.98 weight parts of additional additives selected from other polymers, filling materials and pigments, anti-static agents, reinforcement materials and stabilisers. The total of all of the weight parts is equal to 100. Said moulding material is used in the production of metallized moulding parts.
