Abstract (en)

[origin: WO2005122115A1] The invention relates to a label sheet consisting of a label material and comprising a support material, a top material and an adhesive layer interposed between the support and the top material. The label sheet is characterized in that the top material has at least one first and one second label area (1, 2) and that the support material, parallel to an edge (3) of the label sheet, is provided with a perforated line (4) that is positioned such that the distance (5) of the perforated line (4) to an edge (8) of the second label area (2) equals the distance (6) of the edge (3) of the label sheet to an edge (7) of the first label area. The inventive label sheet is suitable for repeatedly passing through a printer even if one or more labels have been already removed from the label sheet.
