Abstract (en)
[origin: WO2005109820A1] A method for transmitting files to a terminal. A first terminal controls (302) the storage of files on a server. A group of identifiers describing the content of files is transmitted in a message (306) to a second terminal, the identifiers being pointable by the second terminal. The second terminal identifies the message as a specific message for sharing files and separates from the message the files and/or their identifiers into separate fields for display to the user of the terminal. In response to the selection of the user of the second terminal a reply message (312) is created for transmission to the server, the reply message ordering at least one file.
