Abstract (en)

[origin: EP1772076A1] The mattress stop is made in two separate components made from transparent plastic - a base (1) with turned-over edges (8) that engage with two adjacent slats (36a, 36b) and a hole (11) shaped to receive a locking projection on the underside of a right-angled stop (2). The hole is positioned over the gap (37) between the two slats and the locking element fits into the gap when inserted through the hole and rotated through 90 degrees to lock it.
