Abstract (en)
A device and procedure for disabled, impaired or handicapped persons or patients in reaching or maintaining a standing position, in which they can be transported, undressed, dressed, and/or washed in the abdominal region. The device includes a knee support (15) and a movable torso support (10) extending transversely in front of the lower to middle part of the torso of the person to be assisted. The person to be assisted leans with his/her torso slightly forward on the torso support during the raising movement in which the torso support moves simultaneously forward and upward until the person to be assisted has reached a position in which he/she is substantially standing whilst leaning forward over the torso support (10).
