Abstract (en)

[origin: EP1772414A1] Safety system comprises devices (12, 13b, 13c) for locking folding skirt elements (10, 11) in a protecting position so that they pivot by forces on the skirt elements acting toward the shaft and in the horizontal direction. Preferred Features: One locking device for steering the folding movement of the skirt elements is structured so that it acts simultaneously as a guiding and locking device in the protecting position whilst it locks the skirt elements in the protecting position against a common pivoting movement in the direction of the shaft.
