Abstract (en)
[origin: EP1772417A2] A lifting table (1) for heavy loads, especially in motor vehicle production, comprises an under-structure (2), an over-structure for the load (3) and a connecting structure (4) between them giving a changeable separation generated by a power source so that the over-structure can rise or fall. The connecting structure comprises an elastically deformable shape (5) whose vertical measurement can be changed by a force applied in a horizontal direction (25).
