Abstract (en)

The steam iron, made with a sole (1) of outer stainless steel and inner aluminium layers on a heating body (2), has the sole pierced with a network of at least 200 steam outlets (10), each measuring less than 4 sq mm in section and less than 10 mm apart. The holes are in two zones (11, 12) in the middle and outside of the sole, with a gap (14) more than 10 mm wide between them and covering between 10 and 30 per cent of the sole's surface. The holes are fed with steam from a distribution chamber (26) on the underside of the body.
