Abstract (en)
[origin: EP1772933A1] The arrangement (100) has a unit (106) for detecting operating condition of a high voltage electrode. The unit has a component which is responsive to operational current and derived quantity. The component is insulated opposite to a reference potential e.g. earth. The unit for detecting operating condition is designed as an optical and/or acoustic display unit, where the display unit (201) is attached to an electrode section (103).
