Abstract (en)

[origin: WO2005120227A2] A water dispersible granular composition containing an agrochemical active agent, particularly a low use-rate active, and a particular basic, inorganic salt wherein a 1% aqueous solution of the composition has a pH of at least 8.0, and which is made by extruding a premix in the form of a free-flowing powder and without forming a paste provides improved bioavailability of the active. The invention is particularly useful in improving delivery of active from compositions having mixed actives and low levels of sulphonamide active.
