Abstract (en)  
[origin: WO2006015933A1] The aim of the invention is to provide a dishwasher machine with a device for loading crockery or cutlery, which enables the cutlery to be carefully placed in the washing container in an easily accessible, space-saving manner. To this end, a separate loading device or cutlery basket is provided in the crockery basket of the dishwasher machine, said device or basket being at least partially integrated into the main loading plane of the crockery basket and thus arranged on the crockery basket in such a way that it can be displaced between an inserted position and a loading position. In this way, as a result of the displaceable positioning, the cutlery basket can be advantageously displaced independently of the crockery basket, thus enabling the separate loading device to be pulled out of the crockery basket, and thus out of the washing container of the dishwasher, from the front, without the crockery basket itself having to be displaced, thus simplifying the loading or unloading of crockery or cutlery from the cutlery basket.
