Abstract (en)

[origin: WO2006013303A1] The invention concerns a device for moving a small volume of liquid under the effect of an electric control, comprising a first substrate with hydrophobic surface (29) provided with electrically conductive means (24), second electrically conductive means (30) arranged opposite the first conductive means. The invention is characterized in that it comprises third conductive means (32), forming with the second conductive means for analyzing or heating a volume of liquid.
