Abstract (en)
[origin: WO2006005312A1] The invention relates to a liquid distributor comprising a flexible tube, especially a fire hose (1), provided with couplings on both ends thereof for connecting to a similar hose or a pressure source. In order to ensure a flat liquid distribution during firefighting or other fields of application, the hose (1) is provided with lateral outlet nozzles (11, 12) distributed along the length thereof. The invention also relates to a method for producing a tubular liquid distributor comprising lateral outlet nozzles (11, 12) distributed along the length of the hose, said nozzles respectively consisting of an inner part inwardly supported against the hose material and at least one nozzle outer part.
