Abstract (en)  
[origin: WO2006013179A1] The invention relates to a closeable dispensing device which is used to dispense a liquid, viscous or pasty medium which is contained in a container. Said dispensing device comprises an outlet (241) which is used to dispense the medium, a channel (233, 234;311) which extends between the container and the outlet, and a closing device which is used to close the channel and which is disposed in an opening (231) of the dispensing device and which can be displaced in relation thereto. The inventive dispensing device is characterised in that the closing device and the surface which defines the opening is in contact only via elevations (313, 316) which are provided on the closing device or on the surface defining the opening.
