Abstract (en)

[origin: WO2006021719A1] The invention relates to a skip-type container (B), enclosure or site hut. The invention is characterised in that it comprises a plurality of ready-to-mount panels (100, 200, 300, 400, 500) which form at least the base (100) and some of the side walls (200 and 300) thereof. The edges of each panel (100, 200, 300, 400, 500) are equipped with shaped profiles (P) that can be nested inside one another, such that said edges can co-operate with the profile-equipped edges of the panels (100, 200, 300, 400, 500) with which they comes into contact. The invention is suitable for the production and design of containers, skips, site huts and other same-type equipment.
